Investment Strategy	EQUITY INVESTMENT STRATEGY: The fund will invest in stocks of companies that have sustainable business models and are run by management who have proved their prowess in running these companies over business cycles and have respected the rights of minority shareholders. These will include those companies, the businesses of which tend to earn higher return on capital and have a propensity to generate free cash flows. The benchmark of the scheme is Nifty 500 index, which is a broad index designed to measure the performance of the top 500 companies in India, based on size and liquidity. It is an appropriate benchmark as it is designed to capture the movement of the relevant segment of the stock market, where the scheme will be focusing its investments. The Scheme will invest not less than 75% of its assets in companies which have a market capitalization similar to that of the benchmark of the scheme i.e. Nifty 500 index. A bottom-up fundamental approach will be used for identifying such companies. Our process would be agnostic to the industries in which these companies operate/ size (in terms of revenue, market capitalization) at the time of identification. Stock identification process would include company and business analysis, industry analysis, future plans, projections, technical analysis and valuations. Based on analysis of various financial and non-financial parameters, the stocks will finally be shortlisted for portfolio construction process.

	The Fund Manager of the scheme would also take cues from the global macroeconomic trends, Government policy and monetary policy actions to decide on the asset allocation. The allocations will be within the limits defined in the asset allocation table. Apart from in-house research, external research is used as an important source of information. Various magazines, journals, newspapers and databases also help in the research process. DEBT INVESTMENT STRATEGY: The Fund Manager would seek to provide risk adjusted returns by optimizing the tradeoffs between liquidity, duration (interest rate movement), and credit quality, depending on the macro- economic, technical, and market factors including future course of system liquidity, interest rates, and other fiscal and monetary variables. The investment strategy starts from analysis, then incorporates limits, looks at portfolio construction and rebalancing, and finally performance monitoring as a feedback loop. The analysis activity starts from macroeconomic analysis, including fiscal and economic factors, impact of global and local events on India's macro-economy, and finally impact of these on the fixed income market. Technical analysis is undertaken as to the likely range of movement, and deciding the timing. Market activity analysis is looked into to determine liquidity of specific securities. Credit analysis and monitoring is resorted to, and dovetailed with the other analysis to determine credit quality, and ideal spreads where specific securities ought to be trading at. This is a continuous process. All this analysis is sieved through limit filters set by the investment committee. Based on these results, portfolio construction and rebalancing is carried out. The performance of the portfolio is continuously monitored, and feedback is taken as to the performance of individual securities to test the assumptions behind the analysis. The assumptions are then tweaked from the learning incorporated by the feedback. Based on this learning, fresh analysis is carried out for portfolio rebalancing, and the process continuously iterates.
