STATEMENT OF ADDITIONAL INFORMATION

IV. RISK FACTORS

1. Standard Risk Factors

a. Standard Risk Factors for investments in Mutual Fund

Mutual Funds and securities investments are subject to market risks and there can be no assurance or guarantee that the objectives of the Scheme will be achieved.

- a) Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- b) As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- c) Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- d) The Schemes of the mutual fund does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- e) The settler of the Mutual Fund is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Fund.
- f) The present Schemes do not guarantee or assure returns.
- g) The Sponsor, their affiliates, associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Scheme, over a period of time; subject to the SEBI (Mutual Funds) Regulations. These entities may acquire a substantial portion of the Scheme's Units and collectively constitute a major investor in the Scheme. Accordingly, Redemption of Units held by such entities may have an adverse impact on the Scheme because the timing of such Redemption may impact the ability of other Unit holders to redeem their Units.
- h) Different types of Securities in which the Scheme would invest as given in this Scheme Information Document carry different levels and types of risks. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. For example, equity and equity related securities carry a higher amount of risk than debt securities. Investment decisions made by the AMC may not always be profitable

b. Risk factors of not maintaining average AUM of Rs. 20 crore on half yearly rolling basis

Open ended debt oriented schemes shall maintain an average AUM of Rs. 20 crore on half yearly rolling basis. In case, the average AUM falls below Rs. 20 crore, the AMC shall scale up the AUM of such Scheme within a period of six months so as to maintain the average AUM of Rs. 20 crore on half yearly rolling basis, failing which the Scheme shall be wound up in accordance with the provisions of Regulation 39 (2) (c) of SEBI (Mutual Funds) Regulations, 1996 as amended from time to time.

STATEMENT OF ADDITIONAL INFORMATION

c. Risks associated with different derivative strategies

Systematic Risk: Systematic Risk is the risk associated with the entire market. Unlike unsystematic risk, it is not linked to a specific security or sector. Systematic risk is a market risk which can be due to macro-economic factors, news events, etc.

Mark to Market Risk: This risk is on account of day to day fluctuations in the underlying Security and its derivative instrument, which can adversely impact the portfolio.

Credit Risk: Credit risk in derivative transactions arises if the counterparty fails to fulfill its obligations. In exchange-traded derivatives, this risk is generally mitigated through the clearing corporation. In over-the-counter (OTC) contracts, the risk may be higher, though no principal is exchanged in most cases.

Interest rate risk: Derivatives carry the risk of adverse changes in the price due to change in interest rates.

Basis Risk: When a security is hedged using a Derivative, the change in price of the security and the change in price of the Derivative may not be fully correlated leading to basis risk in the portfolio.

Liquidity risk: During the life of the Derivative, the benchmark might become illiquid and might not be fully capturing the interest rate changes in the market, or the selling, unwinding prices might not reflect the underlying assets, rates and indices, leading to loss of value of the portfolio.

Model Risk: Derivatives may be priced using valuation models. If the model is incorrect or if incorrect assumptions are used, it may lead to mispricing and potential losses in the Scheme.

Trade Execution: Risk where the final execution price is different from the screen price, leading to dilution in the spreads.

Systemic Risk: In the case of OTC derivatives, the default of one participant can lead to a cascading effect across counterparties, potentially disrupting the entire financial system.

Leverage Risk: Derivatives are inherently leveraged instruments. A small movement in the price of the underlying asset can result in a disproportionately large impact—positive or negative—on the value of the derivative position.

Execution and Strategy Risk: The effectiveness of derivative strategies depends on the fund manager's ability to identify and execute them efficiently. There is no assurance that such strategies will achieve the

intended objective or result in positive returns. Investment decisions involve uncertainties and may not always be profitable

d. Other risk factors-

i. **Risk associated with investments in Corporate Debt Market Development Fund (CDMDF)**

(Applicable only for open ended debt-oriented schemes of the Fund)

Backstop facility in form of investment in Corporate Debt Market Development Fund

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situations.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023, on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six

STATEMENT OF ADDITIONAL INFORMATION

months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

The investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

ii. Risk associated with Swing Pricing:

Swing pricing is a mechanism that allows a mutual fund to adjust the Net Asset Value (NAV) of a scheme to pass on the costs of large-scale investor subscriptions or redemptions to the transacting investors, thereby protecting the interests of remaining investors.

Valuation Risk: There may be a deviation between the swung NAV and the actual value of the portfolio. The methodology used for swinging may not always accurately capture transaction costs or liquidity premiums.

Operational Risk: Implementation of swing pricing involves complex systems and procedures. Any error in calculation, communication, or application may result in unintended NAV adjustments or unfair treatment of investors.

Transparency and Predictability: As swing pricing thresholds and factors may not be publicly disclosed in full detail, investors may face difficulty in estimating the NAV impact at the time of transaction.

Market Behavior Risk: If investors anticipate the application of swing pricing, they may time their transactions accordingly, leading to distortions in fund flows and liquidity management.

Fairness Perception: There is a risk that some investors perceive swing pricing as unfair, especially in the absence of clear understanding or communication about its application.

iii. Risk associated with LRM:

Liquidity risk refers to the risk that the Scheme may not be able to sell its investments or raise cash to meet redemption requirements in a timely and efficient manner without significantly impacting the market price of assets.

Execution Risk: During periods of market stress, the LRM tools may not be implemented effectively or timely, reducing their intended impact.

STATEMENT OF ADDITIONAL INFORMATION

Valuation Risk: LRM measures such as side pocketing may lead to valuation challenges for segregated assets, especially when they are illiquid or downgraded.

Reputational Risk: Activation of LRM measures may create negative investor sentiment, especially if perceived as restrictive or reactive.

Investor Behavior Risk: Anticipation or implementation of LRM tools can lead to herding behavior or a surge in redemptions, aggravating liquidity stress.

Regulatory Risk: Any changes in regulatory stance regarding use of LRM tools could affect their applicability, timing, and investor communication requirements.

- As the liquidity of the Scheme investments may sometimes be restricted by trading volumes and settlement periods, the time taken by the Fund for Redemption of Unit may be significant in the event of an inordinately large number of Redemption Requests or of a restructuring of the Scheme portfolio. Premium or discount shall be applied to the valuation price arrived as per above methodology to ensure it reflects the fair value. The premium / discount shall be determined at monthly or such other shorter periodic interval as may be deemed necessary. The premium / discount shall be decided by comparing the domestic price i.e. MCX spot price with the valuation price. In case MCX spot price is not available, any other appropriate source may be used as agreed upon by valuation committee to determine the domestic price.

STATEMENT OF ADDITIONAL INFORMATION

i) **Valuation of Foreign Securities & ADR/GDR:**

Exchange to be considered for valuation of foreign securities and ADRs/GDRs is to be approved by the AMC Board. SEBI has not prescribed the method of valuation of foreign securities and ADR/GDR. Process of valuation to be followed by NAVI Mutual Fund would be as follows:

▪ **Receiving last quoted price:**

If the security is listed in a time zone ahead of ours than the same day closing price on appropriate stock exchange as provided by Reuters would be used for valuation. If the security is listed in a time zone behind ours then the previous day's closing price provided by Reuters would be considered for valuation.

In case the security is not traded on the above mentioned days, price of previous day should be used provided the price is not more than 30 days old.

▪ **Converting the price in Indian Rupees (INR):**

Since these prices are in foreign currency these are to be converted in Indian Rupees by applying the exchange rate. Bloomberg also provide closing conversion rate, which can be used for converting the foreign currency prices in INR. This closing price in INR should also be used for valuation of foreign securities and ADR/GDR.

In case Bloomberg has not provided the conversion rate, the closing price of the security should be converted to INR at RBI reference rate.

Valuation of securities with Put / Call options:

The valuation of securities with Put / Call options would be in accordance with Paragraph 9.3 of SEBI Master Circular dated June 27, 2024 and as per Paragraph 9.3.3 of SEBI Master Circular dated June 27, 2024 as amended from time to time.

Inter Scheme Policy (IST):-

1. Market Price of same or similar security available on F-Trac/CBRICS at the time of IST would be considered provided the security traded is in a marketable lot (which is Rs. 25 crs).
2. If market price is not available, previous day valuation price will be considered.

Criterion for determining similar securities:

The determination of 'similar securities' should be arrived at by considering industry, parentage, tenor and rating of the issuer.

STATEMENT OF ADDITIONAL INFORMATION

New IST guidelines applicable within 90 days from 24th September, 2019

1. The price at which IST of any money market or debt security (irrespective of maturity) is to be done will be taken from the valuation agencies
2. IST prices will be given by the agencies within a turn-around-time (TAT) decided
3. If prices from the valuation agencies are received within the pre-agreed TAT, an average of the prices so received will be used for IST pricing
4. If price from only one valuation agency is received within the agreed TAT, that price will be used for IST pricing
5. If prices are not received from any of the valuation agencies within the agreed TAT, the IST pricing will be based on market price of same or similar security available on F-Trac/CBRICS at the time of doing IST provided the security traded is in a marketable lot (which is Rs. 25cr)
6. If market price is not available, previous day valuation price will be considered.

Waterfall approach for valuation of money market and debt securities

As per Paragraph 9.2.3.c of SEBI Master Circular dated June 27, 2024 has laid down broad principles for considering the traded yields for valuation of Debt, money market and government securities. The said circular prescribes AMFI shall ensure valuation agencies have a documented waterfall approach for valuation of Debt & money market securities. AMFI best practices circular (135/BP/83/2019-20) dated November 18, 2019 pertaining to the waterfall mechanism is as follows:

The valuation agencies (CRISIL & ICRA) will follow a waterfall approach for the valuation of money market and debt securities as follows:

- All traded securities will be valued on the basis of traded yields, subject to identification of outlier trades.
- Volume Weighted Average Yield (VWAY) for trades in the last one hour of trading will be used as the basis for valuation of Government Securities and Treasury Bills.
- Valuation of all other money market and debt securities including Government Securities not traded in the last one hour will be done on the basis of VWAY of all trades during the day.
- In case of any exceptional event on a day, only VWAY of trades post such an event will be considered for valuation.
- All trades on stock exchanges and trades reported on trade reporting platforms till end of the trade reporting time (excluding inter-scheme transfers) will be considered for arriving at the valuation every day.
- CRISIL & ICRA will follow a polling process as part of the waterfall approach and will identify Mutual Funds who will participate in the polling process on a particular day.

STATEMENT OF ADDITIONAL INFORMATION

- Polling process policy, approved by the Board of AMC and Trustees, will be documented detailing the governance of the polling process.

Valuation of money market and debt securities which are rated below investment grade & Default:

The valuation of money market and debt securities which are rated below investment grade would be in accordance with Paragraph 9.2.3 of SEBI Master Circular dated June 27, 2024 as amended from time to time.

Changes in terms of investment:

Any changes to the term of investment would follow guidelines as mentioned in Paragraph 9.2 of SEBI Master Circular dated June 27, 2024 as amended from time to time.

COMPUTATION OF NAV

A. Policy of Computation of NAV

The AMC will calculate the NAVs for all the Business Days. The Net Asset Value of the scheme shall be calculated on daily basis and disclosed in the manner specified by SEBI. The Asset Management Company ("AMC") shall update the NAVs on its website (<https://navi.com/mutual-fund>) and of the Association of Mutual Funds in India ("AMFI") (www.amfiindia.com) before 11.00 p.m. every Business Day.

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time. In case of any conflict between the Principles of Fair Valuation and valuation guidelines specified by SEBI, the Principles of Fair Valuation shall prevail.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}$$

 No. of Units outstanding under Scheme on the Valuation Day

STATEMENT OF ADDITIONAL INFORMATION

The NAV shall be calculated up to four decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Option. The NAVs of the Growth Option and the Dividend Option will be different after the declaration of the first Dividend.

The NAVs will be calculated for all the Business days.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

Illustration on Computation of NAV: If the net assets of the Scheme are Rs. 10,55,55,000.00 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: $10,55,55,000.00 / 1,00,00,000 = \text{Rs. } 10.5555$ per unit.

Ongoing price for Redemption (sale) /Switch outs (to other schemes/plans of the Mutual Fund) by Investors.

Ongoing price for redemption /Switch out (to other Schemes/Plans of the Mutual Fund) is the price which a Unit holder will receive for redemption/Switch-outs. During the continuous offer of the Scheme, the Unit holder can redeem the Unit at Applicable NAV.

Investors/Unit holders should note that the AMC/Trustee has right to modify existing Load structure and to introduce Loads subject to a maximum limits prescribed under the Regulations.

Any change in Load structure will be effective on prospective basis and will not affect the existing Unit holder in any manner.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2024 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

STATEMENT OF ADDITIONAL INFORMATION

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2024, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

For exit on or before 30 days from the date of allotment – 1.00%

For exit after 30 days from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 30 days i.e. on or before March 31, 2025; say December 1, 2024, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

= Rs. 12 * (1-1%) = Rs. 11.88/-

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 30 days i.e. after March 31, 2025; say April 1, 2025, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

= Rs. 12 * (1-0) = Rs. 12/-

STATEMENT OF ADDITIONAL INFORMATION

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

B. Policy for Computation of NAV in foreign securities

The AMC will calculate and disclose the NAVs for all the Business Days. The Net Asset Value of the scheme shall be calculated on daily basis and disclosed in the manner specified by SEBI. The Asset Management Company (“AMC”) shall calculate and update the NAVs of the Scheme on its website (<https://navi.com/mutual-fund>) and of the Association of Mutual Funds in India (“AMFI”) (www.amfiindia.com) on next Business day by 10.00 a.m. In case of any delay, the reasons for such delay would be explained to AMFI in writing. If the NAVs are not available before the commencement of Business Hours of the following business day of the next business day due to any reason, the Mutual Fund shall issue a press release giving reasons and explaining when the Mutual Fund would be able to publish the NAV.

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Option. The NAVs of the Growth Option and the Dividend Option will be different after the declaration of the first Dividend.

The NAVs will be calculated for all the Business days.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

STATEMENT OF ADDITIONAL INFORMATION

Any change in Load structure will be effective on prospective basis and will not affect the existing Unit holder in any manner.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

C. Procedure in case of delay in disclosure of NAV

In case of any delay, the reasons for such delay would be explained to AMFI in writing. If the NAVs are not available before the commencement of Business Hours on the following day due to any reason, the Mutual Fund shall issue a press release giving reasons and explaining when the Mutual Fund would be able to publish the NAV.

(viii) Dividend stripping

Under the provisions of section 94(7) of the Act, where a person buys any units within a period of three months before the record date, sells such units within nine months after such date and the income distributed on such units is exempt from tax, the loss on such sale to the extent of the income distributed on units shall be ignored while computing the income chargeable to tax.

With effect from 1 April 2020, any dividend or income distributed in respect of units are not subject to Dividend Distribution Tax and hence, such income is now taxable in the hands of shareholder/unit holder. Therefore, the provisions of dividend stripping shall not apply on such dividend or income from units.

(x) Switching between options

Switching from one option to another option of a Scheme will be effected by way of redemption of units of the relevant option and reinvestment of the redemption proceeds in the other option selected by the Unit holder. Hence switching will attract the same implications as applicable on transfer of such units.

(xi) Set-off and carry forward of losses

According to the provisions of the Act, the capital loss resulting from sale of units would be available for set off against other capital gains made by the investor and would reduce the tax liability of the investor to that extent. However, losses on transfer of units held as long-term capital assets would be allowed to be set-off only against gains from transfer of long-term capital assets. Further, losses on transfer of units held as Short-term capital assets would be allowed to be set-off against gains from transfer of Short term capital assets as well as long-term capital assets. Where such losses arising from sale of units held as capital asset cannot be wholly set-off, the amount of losses not set-off can be carried forward for a period of eight years.

Under the Act, a loss resulting from the transfer of units held as stock in trade or trading asset would be available for set off against income under any other head other than income under the head 'Salaries'. Where such loss cannot be wholly set-off in accordance with the provisions of the Act, the amount remaining to be set-off can be carried forward for a period of eight years and setoff against income under the head 'Profits and gains of business or profession'.

4. **ASBA disclosures**

ASBA disclosures are provided under **Section VI – How to apply - Mode of Payment**

5. **Portfolio Turnover Details**

For open-ended Schemes, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. The fund manager depending upon the view and subject to trading opportunities, may trade in securities, which will lead to increase in Portfolio Turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Schemes. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable measure of accuracy, the likely turnover in the portfolio of the Schemes. The Schemes have no specific target relating to portfolio turnover.

STATEMENT OF ADDITIONAL INFORMATION

D. Information pertaining to Investments by the Schemes of the Fund

1. Derivative strategies

Derivative Strategies: As allowed under the SEBI guidelines on derivatives, the fund manager will employ various other stock and index derivative strategies by buying or selling stock/index futures and/or options.

Objective of the Strategy

The objective of the strategy is to earn low volatility consistent returns.

Risk Associated with this Strategy

The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices

Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

Equity Derivative Instruments:

Equity derivative instrument include but are not limited to futures (both stock and index) and options (stock and index).

Derivatives are financial contracts of pre-determined fixed duration, like stock Futures/options and index futures and options, whose values are derived from the value of an underlying primary financial instrument such as: interest rates, exchange rates, commodities, and equities.

Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on stock exchanges whereas OTC derivative transactions are generally structured between two counterparties. The risks associated with derivatives are similar to those associated with equity investments. The additional risks could be on account of:

1. Illiquidity
2. Potential mis - pricing of the Futures / Options
3. Inability of derivatives to correlate perfectly with the underlying (Indices, Assets, Exchange Rates)
4. Cost of hedge can be higher than adverse impact of market movements.
5. An exposure to derivatives in excess of the hedging requirements can lead to losses.
An exposure to derivatives can also limit the profits from a genuine investment transaction.

STATEMENT OF ADDITIONAL INFORMATION

Exchange traded derivative contracts in stocks and indices in India are currently cash settled at the time of maturity/ expiry.

Concepts and Examples

Futures

Futures (Index & Stocks) are forward contracts traded on the exchanges & have been introduced both by BSE and NSE. Generally, futures of 1 month (*near month*), 2 months (*next month*) and 3 months (*far month*) are presently traded on these exchanges. These futures expire on the last Business Thursday of the respective months.

Illustration with Index Futures

In case the Nifty near month future contract is trading at say, Rs. 3,500, and the fund manager has a view that it will depreciate going forward; the Scheme can initiate a sale transaction of Nifty futures at Rs. 3,510 without holding a portfolio of equity stocks or any other underlying long equity position. Once the price falls to Rs. 3,400 after say, 20 days, the Scheme can initiate a square-up transaction by buying the said futures and book a profit of Rs. 110.

Correspondingly, if the fund manager has a positive view he can initiate a long position in the index / stock futures without an underlying cash/ cash equivalent subject to the extant regulations.

There are futures based on stock indices as mentioned above as also futures based on individual stocks. The profitability of index / stock future as compared to an individual security will inter-alia depends upon:

1. The carrying cost.
2. The interest available on surplus funds, and
3. The transaction cost.

Example of a future trade and the associated costs

Particulars	Index Future	Actual Purchase of Stocks
Index at the beginning of the month	3500	3500
Price of 1 month future	3510	
A Execution Cost: Carry and other index future costs	10.00	
B. Brokerage Costs: Assumed at 0.20% of Index Future and 0.25% for Spot Stocks	7.02	8.75
C. Gains on surplus Funds:	19.56	0

STATEMENT OF ADDITIONAL INFORMATION

(assumed 8% p.a. return on 85% of the money left after paying 15% margin)		
$(8\% * 3500 * 85\% * 30 \text{ days} / 365)$		
Total Cost (A+B+C)	-2.54	8.75

Few strategies that employ stock / index futures and their objectives:

(a) Arbitrage

- i. Selling spot and buying future: In case the Scheme holds the stock of a company "A" at say Rs. 100 while in the futures market it trades at a discount to the spot price say at Rs. 98, then the Scheme may sell the stock and buy the futures.
- ii. On the date of expiry of the stock future, the Scheme may reverse the transactions (i.e. buying at spot & selling futures) and earn a risk-free Rs. 2 (2% absolute) on its holdings without any dilution of the view of the fund manager on the underlying stock.
- iii. Further, the Scheme can still benefit from any movement of the price in the upward direction, i.e. if on the date of expiry of the futures, the stock trades at Rs. 110 which would be the price of the futures too.
- iv. Scheme will have a benefit of Rs 10 whereby the Scheme gets the 10% upside movement together with the 2% benefit on the arbitrage and thus getting a total return of 12%. The corresponding return in case of holding the stock would have been 10%.

Note: The same strategy can be replicated with a basket of nifty-50 stocks (Synthetic NIFTY) and the Nifty future index.

- v. Buying spot and selling future: Where the stock of a company "A" is trading in the spot market at Rs.100 while it trades at Rs. 102 in the futures market, then the Scheme may buy the stock at spot and sell in the futures market thereby earning Rs. 2.
- vi. Buying the stock in cash market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts when there is a convergence between the cash market and the futures market. This convergence enables the Scheme to generate the arbitrage return locked in earlier.

(b) Buying / Selling Stock future:

When the Scheme wants to initiate a long position in a stock whose spot price is at say, Rs.100 and futures is at 98, then the Scheme may just buy the futures contract instead of the spot thereby benefiting from a lower cost.

In case the Scheme has a bearish view on a stock which is trading in the spot market at Rs.98 and the futures market at say Rs. 100, the Scheme may subject to regulations, initiate a short position in the futures contract. In case the prices align with the view and the price depreciates to say Rs. 90, the Scheme can square up the short position thereby earning a profit of Rs.10 vis-à-vis a fall in stock price of Rs 8.

STATEMENT OF ADDITIONAL INFORMATION

(c) Hedging:

The Scheme may use exchange-traded derivatives to hedge the equity portfolio. Both index and stock futures and options may be used to hedge the stocks in the portfolio.

(d) Alpha Strategy:

The Scheme will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying a bank stock and selling Bank Nifty future.

Risk associated with these strategies:

- a) Lack of opportunities
- b) Inability of derivatives to correlate perfectly with the underlying security; and
- c) Execution risk, whereby ultimate execution takes place at a different rate than those devised by the strategy.

Execution of these strategies depends upon the ability of the fund manager to identify and execute based on such opportunities. These involve significant uncertainties and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Option Contracts (Stock and Index)

An Option gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price during a certain period of time or on a specific date.

Options are used to manage risk or as an investment to generate income. The price at which underlying security is contracted to be purchased or sold is called the Strike Price.

Options that can be exercised on or before the expiration date are called American Options while, Options that can be exercised only on the expiration date are called European Options.

Options Risk / Return Pay-off Table

INDEX/STOCK OPTIONS	CALL		PUT	
	BUY	SELL	BUY	SELL
View on Underlying	Positive	Negative	Negative	Positive
Premium	Pay	Receive	Pay	Receive

STATEMENT OF ADDITIONAL INFORMATION

Risk Potential	Limited to premium paid	Unlimited	Limited to premium paid	Unlimited
Return Potential	Unlimited	Premium Received	Unlimited	Premium Received

Option contracts are of two types - Call and Put.

Call Option: A call option gives the buyer; the right to buy specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of call option however, has the obligation to sell the underlying asset if the buyer of the call option decides to exercise the option to buy.

Put Option: A put option gives the buyer the right to sell specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of put option however, has the obligation to buy the underlying asset if the buyer of the put option decides to exercise his option to sell.

Index Options / Stock Options

Index options / Stock options are termed to be an efficient way of buying / selling an index/stock compared to buying / selling a portfolio of physical shares representing an index for ease of execution and settlement.

The participation can be done by buying / selling either Index futures or by buying a call/put option.

The risk are also different when index / stock futures are bought/sold visa- a- vie index/ stocks options as in case of an index future there is a mark to market variation and the risk is much higher as compared to buying an option, where the risk is limited to the extent of premium paid.

The illustration below explains how one can gain using Index call / put option. These same principals of profit / loss in an Index option apply in Toto to that for a stock option.

Call Option

Suppose an investor buys a Call option on 1 lot of Nifty 50 (Lot Size: 50 units)

- Nifty index (European option).
- Nifty 1 Lot Size: 50 units
- Spot Price (S): 3500
- Strike Price (x): 3550 (Out-of-Money Call Option)
- Premium: 100

Total Amount paid by the investor as premium $[50 \times 100] = 5000$

There are two possibilities i.e. either the index moves up over the strike price or remains below the strike price.

STATEMENT OF ADDITIONAL INFORMATION

Case 1- The index goes up

An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves up to 3600 in the spot market and the premium has moved to Rs 200 and there are **15 days more left for the expiry**. The investor decides to reverse his position in the market by **selling** his 1 Nifty call option as the option now is in the Money.

His gains are as follows:

- Nifty Spot: 3600
- Current Premium: Rs.200
- Premium paid: Rs.100
- Net Gain: $\text{Rs.200} - \text{Rs.100} = \text{Rs.100}$ per unit
- Total gain on 1 lot of Nifty (50 units) = Rs.5000 (50×100)

In this case the premium of Rs.200 has an intrinsic value of Rs.50 per unit and the remaining Rs.150 is the time value of the option.

An investor exercises the Nifty Option at expiry

Suppose the Nifty index moves up to 3700 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty call option as the option now is in The Money.

His gains are as follows:

- Nifty Spot: 3700
- Premium paid: Rs.100
- Exercise Price: 3550
- Receivable on exercise: $3700 - 3550 = 150$
- Total Gain: $\text{Rs.2500} \{ (150 - 100) \times 50 \}$

In this case the realized gain is only the intrinsic value, which is Rs.50, and there is no time value.

Case 2 - The Nifty index moves to any level below 3550.

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.5000 (Loss is capped to the extent of Premium Paid) ($\text{Rs } 100 \text{ Premium paid} \times \text{Lot Size: } 50 \text{ units}$).

Put Option

Suppose an investor buys a Put option on 1 lot of Nifty 50.

- Nifty 1 Lot Size: 50 units
- Spot Price (S): 3500

STATEMENT OF ADDITIONAL INFORMATION

- Strike Price (x): 3450 (Out-of-Money Put Option)
- Premium: 30
- Total Amount paid by the investor as premium $[50 \times 30] = 1500$

There are two possibilities i.e. either the index moves over the strike price or moves below the strike price.

Let us analyze these scenarios.

Case 1 - The index goes down

An investor sells the Nifty Option before expiry:

Suppose the Nifty index moves down to 3400 in the spot market and the premium has moved to Rs. 80 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty Put Options as the option now is in the money. His gains are as follows:

- Nifty Spot: 3400
- Premium paid: Rs.30
- Net Gain: $Rs.80 - Rs.30 = Rs.50$ per unit
- Total gain on 1 lot of Nifty (50 units) = $Rs.2500 (50 \times 50)$

In this case the premium of Rs.80 has an intrinsic value of Rs.50 per unit and the remaining Rs.30 is the time value of the option.

An investor exercises the Nifty Option at expiry (It is an European Option)

Suppose the Nifty index moves down to 3400 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty Put Option as the option now is **In the Money**.

His gains are as follows:

- Nifty Spot: 3400
- Premium paid: Rs.30
- Exercise Price: 3450
- Gain on exercise: $3450 - 3400 = 50$
- Total Gain: $Rs.1000 \{(50 - 30) \times 50\}$

In this case the realized amount is only the intrinsic value, which is Rs.50, and there is no time value in this case.

Case 2 - If the Nifty index stays over the strike price which is 3450, in the spot market then the investor does not gain anything but on the other hand his loss is limited to the premium paid.

- Nifty Spot: >3450
- Net Loss Rs.1500 (Loss is capped to the extent of Premium Paid) $(Rs\ 30\ Premium\ paid \times Lot\ Size: 50\ units)$.

STATEMENT OF ADDITIONAL INFORMATION

Debt Derivatives Strategy:

The Schemes may use Derivative instruments like interest rate swaps like Overnight Indexed Swaps ("OIS"), forward rate agreements, interest rate futures (as and when permitted) or such other Derivative instruments as may be permitted under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of Paragraph 7.6 of SEBI Master circular on Mutual Funds dated June 27, 2024 and guidelines issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Fund will use Derivative instruments for the purpose of hedging and portfolio balancing.

The Fund may also use derivatives for such purposes as maybe permitted from time to time. Further, the guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual Fund.

IRS and FRA do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in Derivatives will be in accordance with the extant Regulations / guidelines. Presently Derivatives shall be used for hedging and / or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Scheme at a lower cost. e.g. if buying a 2 Yr Mibor based instrument and receiving the 2 Yr swap rate yields better return than the 2 Yr AAA corporate, the Scheme would endeavor to do that. Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the Derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith.

2. Swing Pricing

- The Swing Framework shall apply in case of scenarios related to net outflows from the schemes.
- SEBI will determine 'market dislocation' either based on AMFI's recommendation or suo moto.
- Once market dislocation is declared, SEBI will notify that swing pricing will be applicable for a specified period.
- Thereafter, mandatory swing pricing will apply for applicable Schemes which:
 - have 'High' or 'Very High' risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation); and

STATEMENT OF ADDITIONAL INFORMATION

- classify themselves in cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix.
- Swing factor as per below matrix shall be made applicable to the above-mentioned schemes and the NAV will be adjusted for the swing factor

Swing factor			
Max Credit Risk of scheme →	Class A (CRV* >=12)	Class B (CRV* >=10)	Class C (CRV* <10)
Max Interest Rate Risk (CRV* ↓)			
Class I: (Macaulay duration <=1 year)	Optional	Optional	1.5%
Class II: (Macaulay duration <=3 years)	Optional	1.25%	1.75%
Class III: Any Macaulay duration	1%	1.5%	2%
*CRV - Credit Risk Value			

- **Impact on investors:**
 - When the Swing Framework is triggered and swing factor is made applicable, both the incoming (unit holders who submit purchase/switch-in requests) and outgoing investors (unit holders who submit redemption/switch out requests) shall get NAV adjusted downwards for swing factor.
 - Swing pricing shall be made applicable to all unitholders at PAN level with an exemption for redemptions up to Rs. 2 lacs for each mutual fund scheme for both normal times and market dislocation.
 -
- **Periodic Disclosures:**

Disclosures pertaining to NAV adjusted for swing factor shall be made by the AMC in SIDs and in the prescribed format in the SAI and in scheme wise Annual Reports and Abridged summary thereof and on the website in case swing pricing framework has been made applicable for a scheme of the Fund.
- **Scheme performance shall be calculated as per unswung NAV.**
- A. Threshold for Trigger Swing Pricing during Normal Times for all open-ended debt scheme(Except overnight funds, Gilt Funds and Gilt with 10-year maturity funds)**

The indicative range of Swing Factor during normal times shall be:

- a. 10% net flow from any debt scheme other than liquid scheme.
- b. 15% net flow from Liquid Scheme.

These are floor figures, and the AMC reserves the right to set limits higher, depending on the dynamics of the scheme both on liability side and on the asset side.

STATEMENT OF ADDITIONAL INFORMATION

B. Indicative range of Swing Threshold:

The indicative range amount of Swing factor based on PRC Matrix is as follows:

Sr. No.	a	B	C
1	0.00 %	0.05 %	0.20%
2	0.05 %	0.10%	0.40%
3	0.10%	0.20%	0.60%

These are floor figures amounts, and the AMC reserves the right to set limits higher, depending on the dynamics of the scheme both on liability side and on the asset side.

C. Triggering Swing-Pricing on re-opening of Scheme after announcement of winding-up.

For instances where Navi AMC /Navi Mutual Fund decides to roll back the decision to wind up the scheme, it shall mandatorily invoke the swing -pricing upon re-opening a scheme for subscriptions and redemptions post such announcement.

The indicative range of swing pricing for the parameter of “re-opening of Scheme after announcement of winding-up” shall be the same as applicable for normal times.

The indicative range of swing pricing shall be applied for a higher of swing period as decided by the Board of Navi AMC Limited or for a minimum of 7 working days, upon re-opening a scheme for subscriptions and redemptions.

3. Provisions on creation of Segregated portfolio

Conditions for creation of Segregated Portfolio:

Creation of segregated portfolio shall be subject to guidelines specified by SEBI from time to time and includes the following:

- 1) Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:
 - a) Downgrade of a debt or money market instrument to ‘below investment grade’, or
 - b) Subsequent downgrades of the said instruments from ‘below investment grade’, or
 - c) Similar such downgrades of a loan rating.
- 2) In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. Creation of segregated portfolio shall be based on issuer level credit events as detailed above and implemented at the ISIN level.

STATEMENT OF ADDITIONAL INFORMATION

- 3) Creation of segregated portfolio is optional and is at the discretion of the Navi AMC Limited (AMC).
- 4) AMC has a written down policy on Creation of segregated portfolio which is approved by the Trustees.

Definitions

1. The term 'segregated portfolio' shall mean a portfolio, comprising of debt or money market instrument affected by a credit event, that has been segregated in a mutual fund scheme.
2. The term 'main portfolio' shall mean the scheme portfolio excluding the segregated portfolio.
3. The term 'total portfolio' shall mean the scheme portfolio including the securities affected by the credit event.

Process for Creation of Segregated Portfolio

- 1) On the date of credit event, AMC should decide on creation of segregated portfolio. Once AMC decides to segregate portfolio, it should:
 - a) seek approval of trustees prior to creation of the segregated portfolio.

Investors may note the essential difference between a segregated portfolio and non-segregated portfolio as follows:

Where the portfolio is not segregated, the transactions will continue to be processed at NAV based prices. There will be no change in the number of units remaining outstanding.

- Where the portfolio is segregated, equal number of units are created and allotted to reflect the holding for the portion of portfolio that is segregated.
- Once the portfolio is segregated, the transactions will be processed at NAV based prices of main portfolio.
- Since the portfolio is segregated for distressed security, the additional units that are allotted cannot be redeemed. The units will be listed on the recognised stock exchange to facilitate exit to unit holders.
- Upon realisation of proceeds under the distressed security either in part or full, the proceeds will be paid accordingly. Based on the circumstances and developments, the AMC may decide to write off the residual value of the segregated portfolio.

STATEMENT OF ADDITIONAL INFORMATION

- Unitholders may also note that the process followed by the AMC/Trustees regarding creation of segregated portfolios shall be in accordance with the provisions laid down by SEBI in this regard, from time to time.

4. Short selling / stock lending

Subject to the SEBI Regulations as applicable from time to time, the Mutual Fund may, engage in Stock Lending. Stock Lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on the expiry of the stipulated period.

The AMC shall adhere to the following limits should it engage in Stock Lending:

Not more than 20% of the net assets of a Scheme can generally be deployed in Stock Lending.

Not more than 5% of the net assets of a Scheme can generally be deployed in Stock Lending to any single approved intermediary / counterparty.

Risks associated with Short Selling & Securities Lending:

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

Short-selling is the sale of shares or securities that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock/security he shorted and returns the stock/security to the lender to close out the loan. The inherent risks are Counterparty risk and liquidity risk of the stock/security being borrowed. The security being short sold might be illiquid or become illiquid and covering of the security might occur at a much higher price level than anticipated, leading to losses.

For details, investors are requested to refer to the Scheme Information Document of the respective schemes.
